

Notes taken in looking through Michaux' Herbarrium Landin des Clantes, Paris April 1840 Polygula Senega 'd'ferent from my plant, leaves narrow Moisers in loose racemes. I have not or leather this plant it is here from Carolina & Georgia Tol. vertirillated is the same as mine though somewhat larger. The Cambyna Mutt appears for a superfished view not to be very & Herent of Jolygoda omented is also a perfectly distant plant which we have not in missouring this here for Simulforance tumania glama & occurea are not here, or is what he calls sempenvers perhaps the same as glama? is here under the name of Delea alopernondes and Borner lagopens Cav. for Haskasking Gøralea annua Phaseolus helvolus is a plant in Mishauis herbanium, which is puhaps different from our plant. Leaflets ovale, or ovate Camelate. Stiple nervorg omte are te, ortice legumes somprome sud tomentone pettides, ilate. In boundly is this purhaps the perenning ? Thas. panisulates My legumes short featrate the the Sh. heterophyllers are the only ones i this herban's Talastia glabella mag be my plant for Arkansa, and the Salina and must be companed. beaves outes detax glyrine monoria or staghinaga monoria is the Courte The jeal frams on fruit a leaves some resemblaare with Leeds much smallen - Rooll different. Glyrine tomentora compriso of Defende december and erect vanisties - dishuit species! My Massour plant is armongst the mundan Alitonia vorginiana. Joney be my Dolihor form Louisinna? - Legen fimilær, vers long, will a long muero; like marginate, so es to verente some Silique - Caly & large, but - The ripe fruit more me vivin punflom may be shut I considered course for Ette Arch _ 11: julis entegnis! Hyper- mirulate walt - vorgindos - le - puntal. La is my plant pyr. - stem terete etc. H. canadrance quite Different for any that I have Dentkam Labretter __ Legumnoz,

Cardamine uniflors My is centerally own plant for Franke. Allerebr polygonordes by is probably my plant for the last - Cias Gerani carolinia restainly our come gerani - This is afferent for the Europe species Halesia here vithort name, from floride may be Ver. my plant for the Salva Montain, your leave, tometon 2.3 flower, short petioles, Together, pen Iles, calyx tometor tabadous, - five druktet. Jule grown have SOUR! ANICAL R D E N ovette animitate Dennette _ _ Or is it my plant islenter nem bitte North - June 1835 Styrax grundifoli- hus some resembleme with my Styrax grandifolin has some restricted with my plant from the Salim hill (Silven mine)

Stuartin male hodendon is my plant

Stilis in grandiflows we have not. All overs is

Moschentus

Dienerther scalin for Minois, is it not the same plent from the Salin kille (Silver mine) Stuantin malukadendr is my plant Hilis me grund. flores ive have not. All overs is Lasture long, folie om som elengata? MISSOUR JEAN CO L. gruns-folie og have not. Himmi Gronovi is here, and the same, which There were the name of mariane - A. waln Viandense Ihave not is a plent i allew L'atris njede = cylindia which appears the same as my grammer folis from the prairies of the Massir figure, bent the anthor is not predumentate, the scales are vilite the lowest ones, Conviolate, the others substitue, acres - leaves somewhat hisper - therefore with my Lingda? for Alkanises, but that has much more dense flowers. L. squarrettas it is here, I have not authed with long law collate in L'Iranisa I = squamelon is here for Carolina is our plant, though more stenden Alle what a have belongs here a I none to L. squerosa the manu to carro co = L'andin (rossed - therefore the plant ronsidence Vifferent. It is vertande mon slenden and Thors Fred opper leaves very simile and those that make me the stoke plant slander. We publish have

it miked up with scambea, Listnis vænter plant - valler also Lielvi aspen L., Choons Vernonie fusicilate - pritis schinoens. bus " is am dag ly our plant! This spenson has even wider leaves than our comme spensor Vernonii praealto appears to be our place not modes of the Ather are generally this Cast one long awned. _ Is it juguely,
my plant for the Manning. ? Maryh the habitus deffers. Soldy flexitables the plant of on shady woods? Senevii lyvatus = our aprinjolies? is here for s. de l'alle James de l'alle Carolate de l'alle grande de l'alle contra les my plant carolate proposed to l'alle contra les montres de l'alle c Alkansus for Carein is not gente 2 ke eng Herming plank. STANICAL GARDEN Congre maylaria is very sime lan to our manglandien, comphonete find here, but has nother larger flowers Atemisie oandate, bods sellonen de hussisje u is my plant for beatstown, though the sperime is but, without leaves - it can not well be the Cherkee plant. Helenia autimmele for ohis a Kentucky, undoubted & our plant, but I am not well see the difference for this ar canalisalation which is also here without lovality but talen! quadribute is a much more started anthod handly hely as lay my plant of the Plant of the Westering helianthed is to in Atthornment with the Religion helianthes Adens chrysanthe mondy our comme plant Divens fondosa also romme, the plant from the lank of Did. Copimunt my plant from volls Occopies out in Clate - the plant from the Kitt aprove Anoth plant, om C. trepartile is here also as C. whollate 2° from Allinois used for dying C. tripteris, simply Turnte leaves, I believe we i have it not

Cereopsis aunirulatu is publiky my simple leans plant for Mushenthal,? - on the plant for Hernlanen ? S. Carobin C. Carrolati is hispid very smooth plant from S. Parol under the same name resembles my Herrelan plant, leaves Enreolete linear very smooth, radiul fem raulie leave, opposite. Coreopsis anstora i om pla Bidens with golde yelle flowers en punt leaves, __ for Illinons Helianthun gyateus is handly our plant je I do not revollert to have seen it in Misson. Helanthus mollis our plant for selinois, also by the name of scabox and camerieus. It it the True mollis of d'inne? Keliauthus tomentosus from Meliauthus of have not seen Ausburkis purpurus both vanistius here, in the same Publishes purpures both van paper in locality me is the senting Hot. Fruit (Stray? Relaciniste is the plant from shady most plan. A. punate for open sumy prises A hista simple læaves Sancolet et. our plant from wester, fieldset. ? hardly! A. tolote over lager plant for woods _ the Ahn is not here. Silphi- integrifolie is our Asterisies.

Spermens for Menois here SiA is quite different for Caroling for Caroling. I pumile ? small woolly - have I not that from suckley without name? Tolymain tetragonotterra prestages my Uvedalis Viole palmate is cetterly not our prince plant from Aleum e my herbani. Orske hundlis is om spertabile; Ontheir les vellete is our tributate O. vistate and leven are 2 species of talement Iphrys aestivalis 2 species - the larger remua i the smaller my plat from Almanas with green Ceaves

Notes for Moshowy herbane I Selevis or linte probably our plant Tragin indete 4 menter folis - my herben-, Tr. urens Alnua serrutata undrubtedly my plant Ambroni pan relate i alateri is om plant A. als. Mipli a A. artem? Foli I have not A Gidentata our plant! Iva annu is my xanthifti, for Delinois Sayittaria Cancifolis for Carolin with very large over Cancolate leaves Myriophylle scabratum for Conlin is undoubtedly M. heterophyle probably on vertire llate Juenn tribby is our falante 9. februta iset perhaps om palaskis? or van 9. primos palaskis is hairy, I have it not q. loweston simuate appears to be anoth variety of 9. falouts, as well as another specien libeled 9. tomentosa brifist. Enghabi grant fli appears to be very s. m. la co, altophas seed is though not quite ripe, evidently has also themlash muricate or rather trabernedate. It is here for the Sea roast of Georgia. The upperment leaves are also rose voland Eighol Speraruhe has, if this is mally the plant our our n illed plant. The symonyes are give E partuleronde Engharte for florida, on the Calego is the wood paper if the " evossed - but I van not see any difference, except that the Sperimes are smaller though end Styllings deglocation has ovate bave, and is certainly quite different from my plant Crotion monanthogynum is our Cr. ellipticus N. Soht to our Greepers - are the any of them the annual riggs extention of es in many south america Lane,

Hex princides is our plant, but mille nib below pubercent, Vitis labourn very worly below soft formentoso forgrape - not - the western states Vaestivilis om plant. The summer grape Vitis sordifolie utstergrape ab insolis bet no Conslity given most ordate armente leave, what it it? mostle amplopsis conficience stables Du undte Sheet the Couldy goe is Hen Engle to Carolina - Leaves smill mile for Vitis riparia Vigne des Cattares hab in rigi:
